Topic and Video

I chose to study and teach about: **Bootstrap Awareness**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: <https://youtu.be/Jo1a33F5EPA>.

Summary

In my video, I explained what Bootstrap is and how it helps developers build websites faster using prebuilt classes, responsive layouts, and reusable components. I discussed the problems Bootstrap solves, including faster development, design consistency, and cross-browser compatibility.

I also demonstrated Bootstrap's grid system using containers, rows, and columns to create responsive layouts. During the coding portion, I showed how to connect Bootstrap with a CDN link and build a simple page using Bootstrap classes instead of writing large amounts of CSS manually.

I compared Bootstrap to native CSS and explained that while Bootstrap is faster and more convenient, native CSS offers more customization and creative control. After recording, I realized I should have mentioned more about the downsides of Bootstrap, especially how websites can start to look similar if developers rely too heavily on the default styles.
